### A Standard Drink

Craft beers often contain a higher % alcohol.

Women experience alcohol-related negative health outcomes at lower levels of drinking than men.

#### Why?

- Less body water to dilute alcohol
- More fatty tissue to retain alcohol
- Lower levels of enzymes that metabolize alcohol

Alcohol remains at higher concentrations for longer periods of time in a woman's body.

#### Key points for alcohol brief interventions:

- **Breast**, liver, throat, colon cancers
- Liver disease
- Low bone density
- Alcohol-induced brain damage
- Experiencing violence
- Unintended or unwanted sexual activity, STIs, and unintended pregnancy

Consider history of trauma as a contributing factor for substance use.

Consider risk for an alcohol or drug-exposed pregnancy by addressing substance use and/or contraception

See the Adult SBIRT pocket card for other alcohol-related consequences.

- *“How does your current level of drinking fit with what matters most to you?”*
- **When readiness is low, ask,** *“What do you enjoy about drinking? What do you not enjoy about drinking?”* Then summarize both sides.
